WEBSITE PROJECTS AND RELATED FLOWCHARTS

Basic HTML & CSS practical documentation

Projects included

1. Community Service Project Website
2. User Authentication System
3. Indian Tourism Website

This document summarizes the purpose and main sections of each website, includes the supplied output screenshots, and provides a simple process flowchart for each project.

1. Community Service Project Website

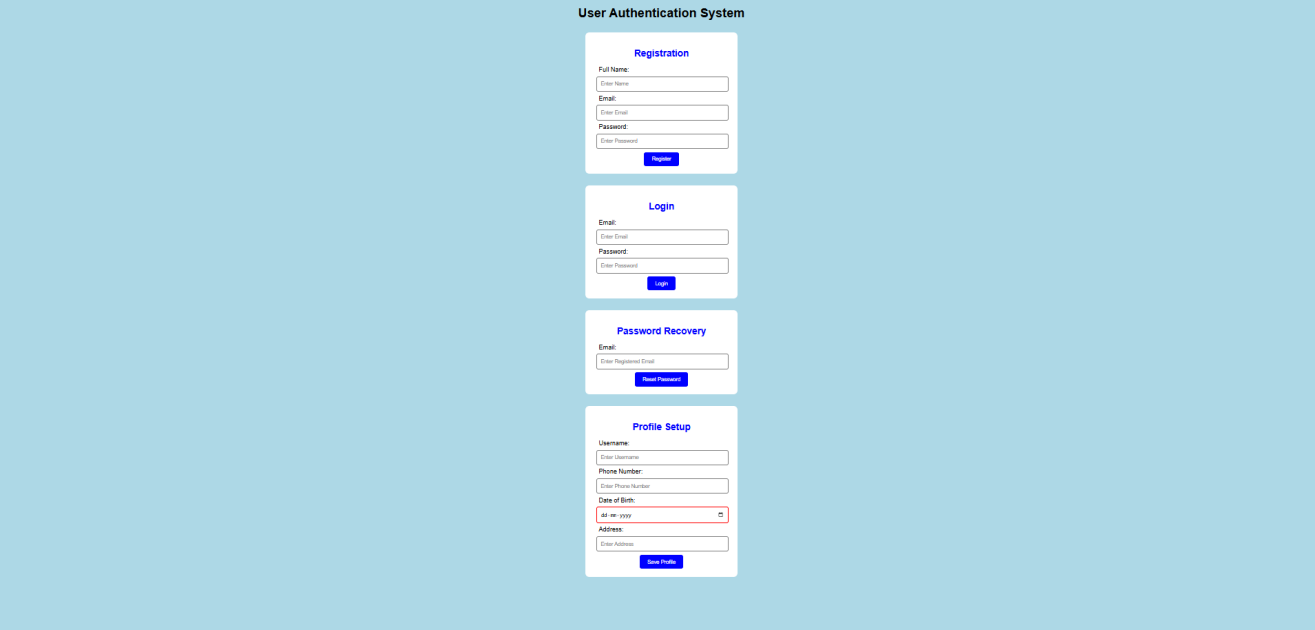

Documents project objectives, beneficiaries, implementation stages, volunteer details, photographs, weekly reports, timeline and outcomes.

Main section	Purpose
Objectives & beneficiaries	Explain the community need and target groups.
Implementation & timeline	Show project stages and weekly schedule.
Volunteers & photographs	Record team participation and activity evidence.
Reports & outcomes	Summarize progress and results.

2. User Authentication System

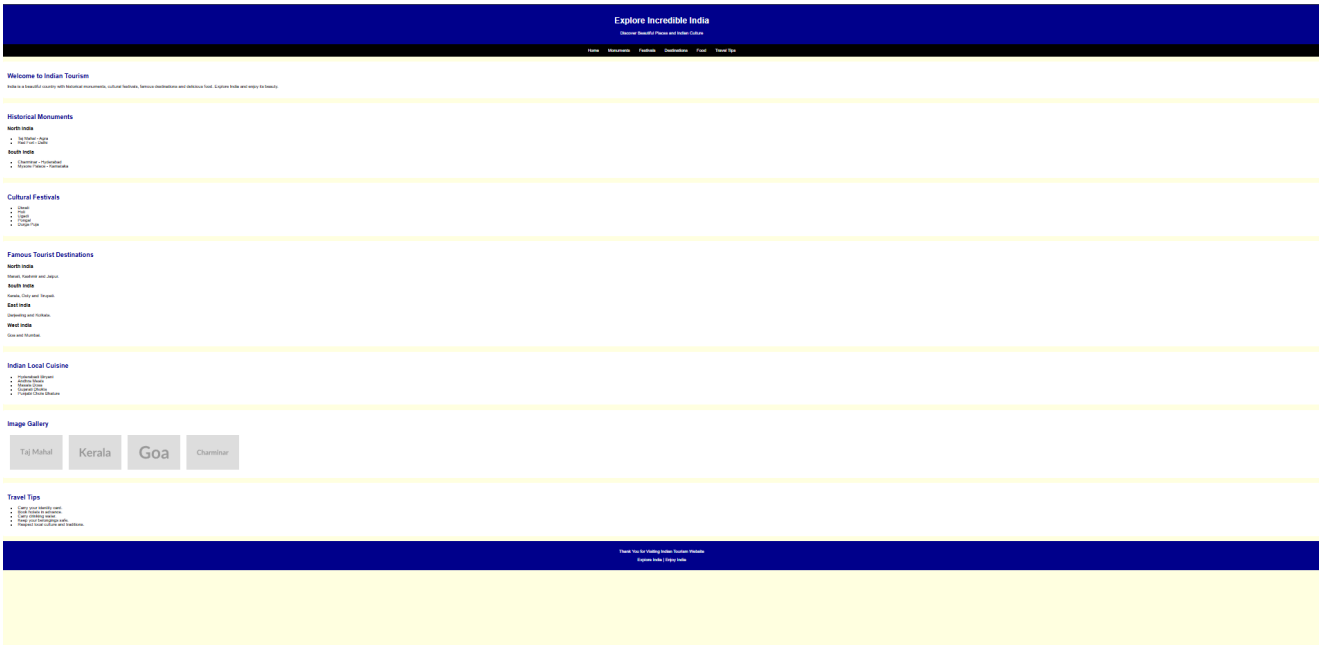

Shows registration, login, password recovery and profile setup forms with labels and basic browser-side validation.

Page / form	Purpose
Registration	Collect a new user's name, email and password.
Login	Collect credentials for sign-in.
Password recovery	Collect the registered email for account recovery.
Profile setup	Collect profile details such as username and phone.

3. Indian Tourism Website

Organizes historical monuments, cultural festivals, destinations, local cuisine, travel tips and an image gallery.

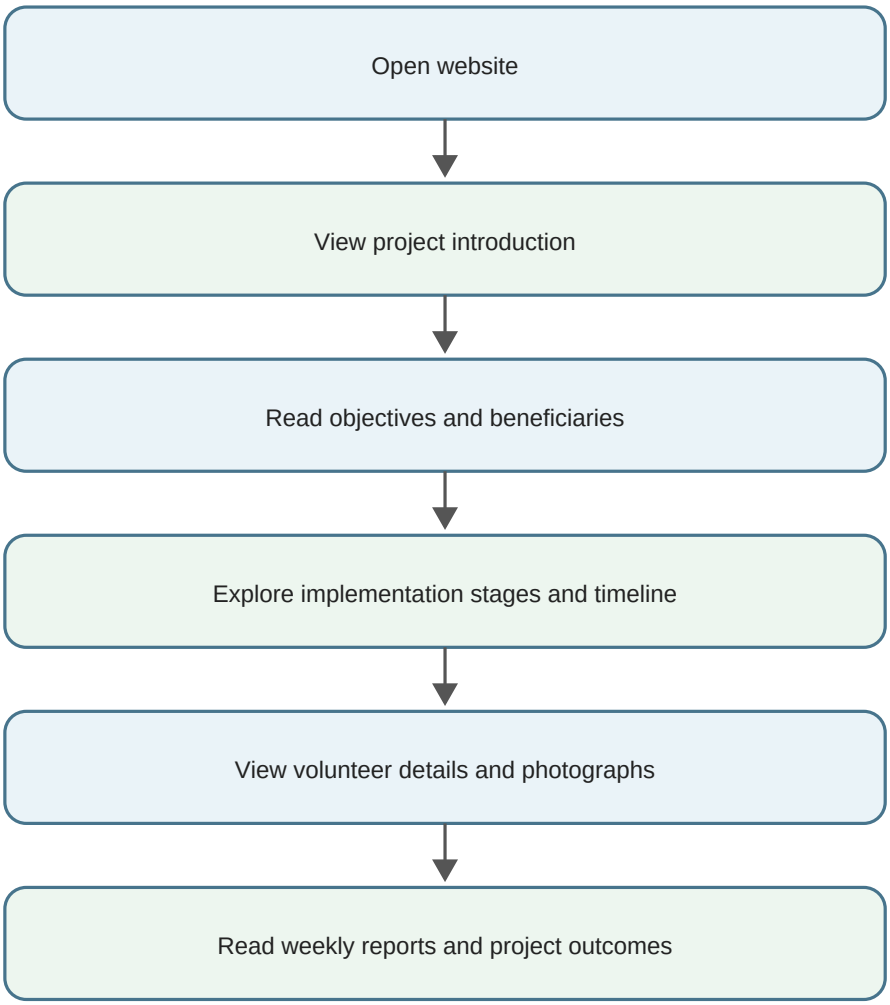

Content area	Purpose
Historical monuments	Present heritage attractions by region.
Festivals & destinations	Introduce culture and places to visit.
Local cuisine	Highlight regional food.
Gallery & travel tips	Provide visual references and visitor guidance.

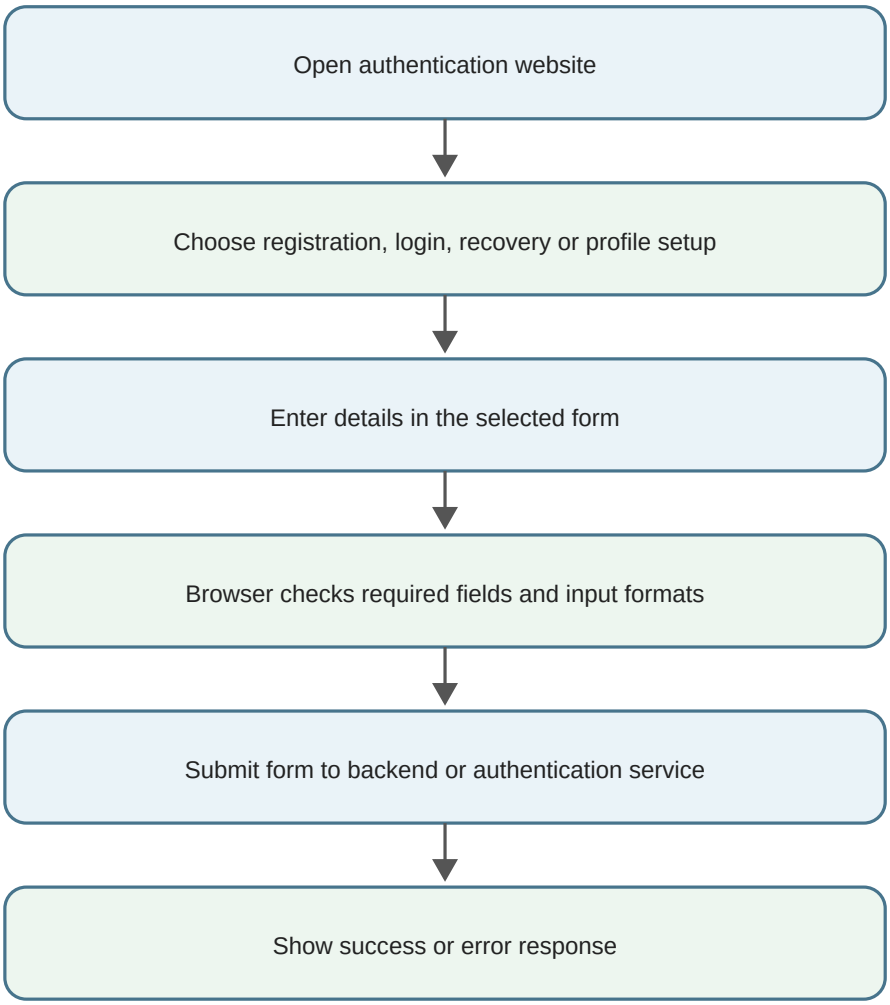

4. Related Flowcharts

The flowcharts show the basic sequence of actions in each website. They describe the front-end page flow; they do not imply that data is stored or authenticated unless a backend is connected.

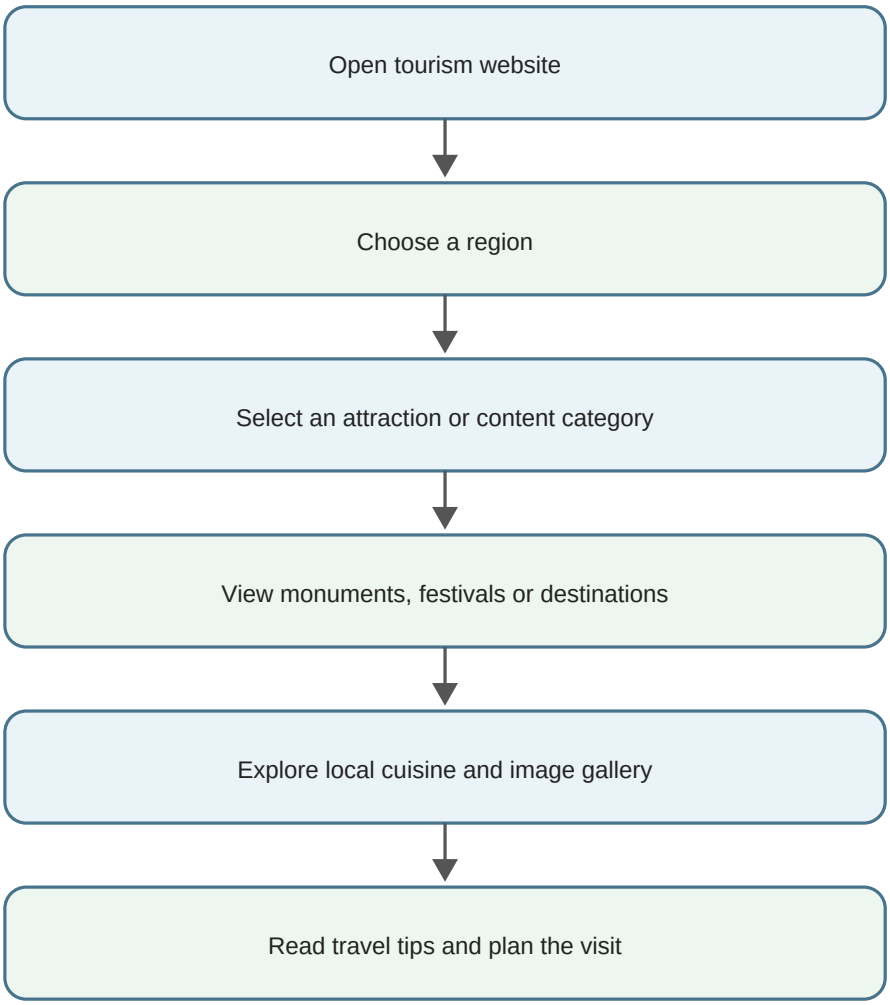

Community Service Website Flow

User Authentication Website Flow

Tourism Website Flow

5. Conclusion

These three beginner-level websites demonstrate how semantic HTML elements, forms, links, lists, images and CSS can be used to organize information. The Community Service website documents project work, the Authentication website demonstrates common user forms, and the Tourism website presents travel information by region and attraction type. For real account creation, login and password recovery, a secure backend or trusted authentication service is required.

Note: Replace sample content and placeholder images with your actual project information before submitting the practical record.
